Erratum

In the paper "Characterization of protein involvement in rabies virus binding to BHK-21 cells" by J. H. Broughan and W. H. Wunner [Arch Virol 140: 75–93 (1995)], the following changes should be noted: enzyme concentrations in Tables 1–3 should read "µg/ml" (instead of mg/ml); in Table 1, the amount of unlabeled virus added to saturate specific binding should read "312 µg" (instead of mg) and control-total binding should read "8151" (instead of 1851); in Table 3 legend, volume of 100 µg should read "volume of 100 µl". Under *Preparation and solubilization of BHK-21 cell membranes*, the text should read "pelleted cells were suspended in 100 ml" (instead of µl), "2 µg/ml DNase" (instead of mg/ml), "homogenate (28–30 ml)" (instead of µl), and "20 µg/ml each of PMSF" (instead of mg/ml). Under *Receptor assays for rabies virus*, Binding of radiolabeled virus to cells, the text should read "50 µg/ml DEAE-Dextran" (instead of mg/ml) (p. 77). Under *Extraction of peripheral membrane proteins*, the text should read "aliquots of PM in 200 µl" (instead of ml) (p. 79).
