 P. M. Panel Discussion on Selected Papers.

The Executive Committee approved the program in principle and requested the Program Committee to arrange the details.

The Program Committee proposes to invite speakers from various geographical areas for a discussion of epidemiological aspects of acute head injuries. They will present a review of the organization of services in their areas, including statistical surveys, both national and local; methods of handling cerebral trauma by general surgeons and specialists; effects of population density, traffic and industrial elements. Ten minutes will be allowed each speaker for presentation of a summary, followed by a one hour panel discussion.

Research and newer methods of treatment in acute head injuries will be included at the first afternoon session, and in acute spinal injuries at the following morning sessions. The presentations in the Brain Stem Symposium will be by invitation. For the last afternoon, the Program Committee will select from free papers subjects for panel discussion. Such an overall program will necessitate limitation of many papers to summaries, and presentation of other papers by title only. Details regarding submission of titles and abstracts will be published early in the fall of 1964.

Consideration of holding a symposium on stereotactic surgery at the Neurological Congress in Vienna, or on the Saturday after the Neurosurgical Congress in Copenhagen, was left for final decision by the Program Committee.

XVIth Congress of the Società Italiana di Neurochirurgia

A paper on "Intramedullary tumors" will be presented and discussed on the first day, and another paper on "Histochemistry of intracranial tumors" will be discussed on the second day. Only short papers pertaining to these topics may be presented and the reading text should be forwarded beforehand, at any time before actually reading the paper. The titles of the short papers should be sent to the Secretary of the Society not later than October 15, 1964. For further information, please apply to the Secretary (Dr. *Giulio Morello*, Via Celoria 11, Milano, Italy).

Errata

In the paper "Primary Reticulosis of the Central Nervous System. Microgliomatosis" by A. A. *Miller* and F. *Ramsden* (*Acta neurochirurgica*, Vol. XI, Fasc. 3, 1963) on page 475 there is a typographical error: the words macroscopical and microscopical have been transposed in the key for Fig. 24.
