Addendum to:
“Invariants of Knot Cobordism”

Inventiones math. 8, 98 – 110 (1969)

J. LEVINE (Waltham, Mass.)

Part of the proof of Theorem 24 on p. 108 is wrong. The conditions on the elements $\{\alpha_i\}$ of G_ε should be changed to read as follows:

- (i) each α_i is of order two
- (ii) $\sum_i \lambda_i \alpha_i \in 2T$ if and only if each λ_i is even.

The construction of the $\{\alpha_i\}$ is unchanged. Property (i) was already observed. To verify (ii) we observe, using Lemma 7(b), that if $\sum \lambda_i \alpha_i \in 2T$, then $\prod_i \Delta_i(t)^{\lambda_i}$ would have the form described in Lemma 7(b). But this would force all the λ_i to be even.

The references can be augmented as follows.
