Erratum

Analytic Representation for Form Factors and Determination of Radii of Hadrons and Light Nuclei

Olgierd Dumbrajs and Magdalena Staszel

Z. Physik A **280**, 383–384 (1977)

We have made a trivial numerical mistake on page 384: $t_0 = 4m_\pi^2 \approx 1.87 \text{ fm}^{-2}$ and not $\approx 0.37 \text{ fm}^{-2}$ as stated in the paper. Unfortunately this has led us to a serious mistake of criticising unjustly in the footnote on the same page the fits of the paper by F. Borkowski, G.G. Simon, V.H. Walther and R.D. Wendling, *Zeitschrift für Physik A* **275**, 29 (1975). These authors have not used data on $F(t)$ for

$|t| \geq 1.87 \text{ fm}^{-2}$ for determining the radius of the proton. Our footnote is wrong.

We regret our unfortunate mistake.
