ERRATA

STIRLING, J. W. (1992) Unfixed tissue for electron immunocytochemistry: a simple preparation method for colloidal gold localization of sensitive epitopes using ethanediol dehydration. *Histochem. J.* **24**, 190–206.

In the 'Materials and methods' section (page 191) under the heading 'Glutaraldehyde-osmium-araldite' the staining times should read "...4% aqueous uranyl

acetate for 2 min and lead citrate (Reynolds 1963) for 1 min."

Also in the 'Materials and methods' section (page 192) under the heading 'Negative controls' the last sentence of point 2 should read "For incubation purposes all antibodies were diluted in PBS with 1% BSA...".

Apologies for any confusion the errors may have caused.
