Errata

The following corrections may be noted for the article, "Separation-Individuation and Ego Identity Status in Late Adolescence: A Two-Year Longitudinal Study," by Jane Kroger and Stephen J. Haslett (*Journal of Youth and Adolescence*, Vol. 17, No. 1, 1988).

Pages 66, lines 19–21 should read: Asymptotically, that is with sufficiently large sample sizes, the log likelihood and Pearson chi-square statistics are equal. For sparse tables the Pearson statistic would appear to provide the better test (Dale, 1983; Koehler, 1986).

Page 68, third paragraph should read: The tests using Models d(i), e(i), and f(i) are all not significant. Attachment styles for both 1984 and 1986 can therefore be collapsed so that anxious and detached styles become the single category of "nonsecure." (A series of six preliminary tests for 1984 and 1986 had already established that categories within secure, anxious, and detached styles could be collapsed to form these three general groups.)
