Z. Phys. C – Particles and Fields **30**, 551 (1986)

We have repeated the processing of our data on Υ' - and Υ'' -meson masses using a more correct formula for radiative corrections from [24]. The results obtained were:

$$M(\Upsilon') = 10023.6 \pm 0.5 \text{ MeV}$$

$$M(\Upsilon'') = 10355.3 \pm 0.5 \text{ MeV}.$$

These values are 0.2 MeV lower than our previous results [10] obtained with radiative corrections from [23].
