Exact Gravitational Field of the Infinitely Long Rotating Hollow Cylinder

E. Frehland

Commun. math. Phys. **26**, 307–320 (1972)

In Eq. (3.12b) S is defined by $S = (1 + 2\sigma_z R_0 - 3\sigma_{(z)}^2 R_0^2)$. In Eq. (4.3) the sign of ω and $v_{\text{rel.}}$ should be changed. Hence line 15 on page 319 should read: “From (4.3) follows that sign $\omega = -\text{sign } b \dots$ ” and the first sentence on page 319: “... the reference system inside, given by v'' , rotates with respect to the reference frame w'' outside in the same direction as the cylinder.”
