Erratum

In the article “Sequence Determination and Genetic Content of an 8.9-kb Restriction Fragment in the Short Unique Region and the Internal Inverted Repeat of Marek’s Disease Virus Type 1 DNA” by Sakaguchi, et al. (*Virus Genes* 6:4, 365–378, 1992), the nucleotide sequence numbered 2162 and 2163 in Fig. 2 should be C and T. In the result, a stop codon, TAG, turned to CTG corresponding to leucine, which yield a new open reading frame composed of 537 nucleotides designated US537. The position of US537 in the MDV1 genome was shown as an opened arrow in revised Fig. 1. The nucleotide sequence in Fig. 2 deposited in GenBank are corrected.
