Erratum

Infection 24 (1996) no. 3

Preac Mursic et al.: "Formation and Cultivation of *Borrelia burgdorferi* Spheroplast-L-Form Variants," pages 218–226.

On page 218, the last sentence of the summary should read: "With regard to the polyphasic course of Lyme borreliosis, these forms without cell walls can be a possible reason why *Borrelia* survive in the organism for a long time (**probably with all β -lactam antibiotics**) and the cell-wall-dependent antibody titers disappear and emerge after reversion."
