Gene Control in Eukaryotes and the c-Value Paradox: "Excess" DNA as an Impediment to Transcription of Coding Sequences

Emile Zuckerkandl

J. Mol. Evol. 9, 73 (1976)

Through the printer's error the following two mistakes have occurred in this article:

p. 78, paragraph 2, line 9: instead of "Rather they probably simply represent", read "Thus they represent" . . .

p.82, paragraph 3, line 6, read: "It is marginally fulfilled by one of the four (Fig. 5 of the authors)" instead of: "Fig. 3".

p. 83, paragraph 4, line 8, read: "If so, then 2 of the 3 pictures show that the hnRNA region and the structural gene region overlap, suggesting transcription from the same strand with frameshift".

p. 96, paragraph 3, lines 6 to 8 are an accidental repetition of lines 3 to 5.
