In the above article the status and most pressing problems of selective screening and care for patients with inborn errors of metabolism was summarized for different countries. These data were obtained from a number of colleagues. They need to be acknowledged not only for the trouble they took but also to allow fruitful discus-

sions. Unfortunately, Dr. Brian Fowler (formerly of Manchester, UK, and now in Basel, Switzerland), who collected the data on selective screening in Great Britain, was not acknowledged in the original article. I sincerely regret this mistake and hope that it can be partially corrected by this note.
