LIBRI NOVI

Mykologische Schriftenreihe, Heft 2, edited by H. BRAUN & H. RIETH — W. BRAUN, G. & N. GORKI: Untersuchungen über die *Candida albicans* Antikörper im Tierversuch. — J. MORENZ: Taxonomische Untersuchungen zur Gattung *Geotrichum* Link. 64 pp. 12 figs. MDN 8.80. J. A. Barth, Leipzig. 1964. (W. BRAUN, G. & N. GORKI: Investigations on the antibodies of *Candida albicans* in animal experiment. — J. MORENZ: Taxonomic investigations concerning the genus *Geotrichum* Link.).

This second issue of Mykologische Schriftenreihe (Mycological Series of Papers) is dealing again with the important group of yeastlike organisms. The first paper reports on experimental investigations concerning the relation of the values of blood and skin sugar, the height of agglutination titers as to *Candida albicans*. The second paper by MORENZ further discusses the systematic position and medical significance of *Geotrichum* LINK which he already treated in the first issue of this series.

This series and the papers published in it are a valuable contribution to the mycological literature.
