will henceforth be published by
plenum publishing corporation**

ERRATA

In Dr. William Goldfarb's article "Verbal Symbols to Designate Objects: An Experimental Study of Communication in Mothers of Schizophrenic Children" which appeared in the *Journal of Autism and Childhood Schizophrenia*, 1973, 3, 281-298, several misprints and omissions were noted. The following sentences should have read:

p. 281, lines 7-9: Does the mother strengthen or does she attenuate the development of these purposeful functions in her child—functions which include his social and affectional responses?

p. 284, lines 28-30: To be sure the mother's assistance was verbal, the mother and child sat on opposite sides of an opaque screen.

p. 296, lines 25-28: The referential messages of the mothers of the schizophrenic children carried a lower level of informational content and gave more stylistic evidence of cognitive fragmentation, tentativeness and ambiguity than did the verbal messages of mothers of normal children.

p. 296, last line, p. 297, lines 1-3: The answer to the questions of the deviant child's effect on his mother's communication requires other investigations such as a study of the mothers of schizophrenic children in dialogue with normal siblings of the psychotic child.
