PACS 61.20.Gy – Statistical theories of liquid structure.

PACS 99.10 – Errata.

The value of the interchange free energy w in Na-K alloys, which is obtained by fitting the experimental data on S_{cc} , is $w \approx 1.1 k_B T$ instead of $w \approx 11 k_B T$ as was misprinted in the article. Hence, the claim made in the article that the elastic contribution to w , which is of order $10 k_B T$, must be largely cancelled by the electronic charge transfer contribution.
