Announcements

Seminar: "Imageology 1979"

A seminar entitled "Imageology 1979" will be held **February 16-23, 1979** at the Konover Hotel in Miami Beach, Florida. The course will emphasize algorithms (a term describing the use of step-by-step procedures to solve problems).

The program director is Manuel Viamonte, Jr., M.D. The seminar is sponsored by Miami Seminars and the Department of Radiology at Mount Sinai Medical Center, in collaboration with the Department of Radiology at the University of Miami/Jackson Memorial Medical Center.

The course carries 36 AMA Category I credit hours; an additional 8.5 credit hours may be obtained by completing self-instructional material.

For further information, please contact: Mrs. Lucy R. Kelley, c/o Miami Seminars, Post Office Box 343762, Coral Gables, Florida 33134, USA.

Course: Angiography and Interventional Radiology

The Society of Cardiovascular Radiology will present a course, "Diagnostic and Therapeutic Angiography and Interventional Radiology," Wednesday, **March 21 through Sunday, March 25, 1979**

at the Cerromar Beach Hotel, Dorado Beach, Puerto Rico. The course is approved for 25 Category I Continuing Medical Education credits. Tuition is \$295 (\$195 for residents and fellows).

Further information may be obtained from Andrew B. Crummy, M.D., Secretary-Treasurer, Society of Cardiovascular Radiology, 1300 University Avenue, Madison, Wisconsin 53706, USA.

European Society of Cardiovascular Radiology

The fourth Congress of the European Society of Cardiovascular Radiology will be held from **May 3 to 5, 1979** in Nuremberg.

Subjects of the Congress will include: (1) angiography in pulmonary vascular disease and special forms of treatment; (2) angiography in the cervical region, extracranial cerebrovascular disease, angiography of thyroid and parathyroid glands, embolization procedures of the neck; (3) Image intensifier fluorography; and (4) other topics of interest in the cardiovascular field.

The deadline for "work in progress papers," medical-technical and pharmaceutical exhibitions is February 1, 1979.

For an announcement and further information, please contact the Secretary's Office: Prof. Dr. E. Zeitler, Radiologisches Zentrum, Klinikum Nürnberg, Flurstr. 17, D-8500 Nürnberg, FRG.

Correction

In the article, "Accessory Blood Supply to the Liver from the Dorsal Pancreatic Artery: An Unusual Anatomic Variant," by D.H. Gordon et al. (1:199-201, 1978) the final paragraph on page 201 should read:

Variations in hepatic blood supply are important to both the surgeon and the radiologist. Because they are end arteries, surgical

ligation of aberrant hepatic arteries may cause hepatic damage, and since the superficial and deep cystic arteries may arise from them, there is also potential for compromise of the gall bladder [2]. In addition, a lesion may be overlooked unless all the possible origins of aberrant hepatic arteries are injected. Therefore, when studying the liver it is important to opacify the splenic and superior mesenteric arteries as well as the main hepatic artery.
