ERRATA

$$\sum_{j \in S} A_{ij} u_j = - \sum_{j \in S} A_{ij} \sigma = \sum_{j \in S} A_{ij} \sigma$$

that is

$$\sum_{j \in S} A_{ij} (\sigma - u_j) = 0;$$

since $A_{ij} \leq 0$ and $u_j < \sigma$ for $j \in S$, we get $A_{ij} = 0$ for any $j \in S$, when $i \in S$. Then, after a rearrangement of its rows and columns, we can decompose A as follows:

CORRIGE

$$\sum_{j \notin S} A_{ij} u_j = - \sum_{j \in S} A_{ij} \sigma = \sum_{j \notin S} A_{ij} \sigma$$

that is

$$\sum_{j \notin S} A_{ij} (\sigma - u_j) = 0;$$

since $A_{ij} \leq 0$ and $u_j < \sigma$ for $j \notin S$, we get $A_{ij} = 0$ for any $j \notin S$, when $i \in S$. Then, after a rearrangement of its rows and columns, we can decompose A as follows:
