sobre papel de filtro Waltham no. 1. Los animales habían recibido diferentes protocolos de vacunación frente a la enfermedad de Newcastle y las muestras se recogieron para estudiar la respuesta vacunal a nivel de campo. El papel de filtro se lavó con solución Brij-35 y después se realizó el test de inhibición de la microhemaglutinación para detectar anticuerpos frente a Newcastle. Los títulos de anticuerpos variaron entre 2^4 y 2^9 . Se discuten las posibles causas de la baja respuesta observada.

Appointment

Bryony Jones I would like to congratulate Bryony Jones on her appointment from January 1st as UNICEF Operation Lifeline Sudan Livestock Programme Project Officer. She leaves her position as VETAID South Sudan Programme Co-ordinator and her new role will be to co-ordinate the work of UNICEF and NGOs working in the livestock sector of Operation Lifeline Sudan, whose main aims are to control rinderpest and other major livestock diseases in South Sudan through the setting up of community-based animal health services in areas affected by the war

Erratum

I wish to acknowledge the assistance of Dr Olivier Sparagano for translation into English of Professor Uilenberg's paper "Integrated control of tropical parasitoses" in the November issue. Due to a regretted oversight on my part, this was omitted from the publication.
