of investigations evaluating mucous transport in the respiratory tract using radionuclides. This chapter is also fairly detailed, and an extensive bibliography on the subject is provided (141 citations). These chapters should be of interest primarily to those working in the particular area being discussed.

Overall, the text has segments that should prove to be quite valuable to the practicing chest physician and resident in chest medicine. Other parts should prove to be of value to those investigating pulmonary pathophysiology or to residents in nuclear medicine. The text appears to be fairly well written and the illustrations are of good quality. There are several minor errors in labeling of the illustrations, but this should not detract from the overall value of the text.
