Origin of the Kinetic Energy of Expansion of the Universe in the Fermi Energy of the Ylem.

L. S. LEVITT

Department of Chemistry, College of Science, University of Texas - El Paso, Tex.

(Lettere al Nuovo Cimento, 12, 537 (1975))

The following errata should be corrected in this paper:

eq. (14) should read $\eta' = \frac{2}{3} \eta_0 = 2.4 \cdot 10^{80}$ particles,

eq. (18) should have $V_0^{\frac{2}{3}}$ instead of $V_0^2/3$.
