Comments on Distorted-Wave Impulse Calculation.

Y. HATSUDA and Y. SAKAMOTO

Department of Physics, Kyoto Sangyo University - 603-Kyoto

(Lett. Nuovo Cimento, 21, 551 (1978))

$\mathbf{p}$ and $\mathbf{p}'$ in the 5-th line from the bottom on page 551 should read as $\mathbf{r}$ and $\mathbf{r}'$.
 $\mathbf{q}$ in eq. (5) on page 552 should read as $\mathbf{q}'$.

The length parameter of harmonic-oscillator function a_0 in the 10-th line from the bottom on page 553 should read as 1.98 fm, instead of 1.68 fm.

The first and second lines on page 554 should read by interchanging them as follows:
« calculation with the DWI approximation completely fails to reproduce the measured cross-sections in absolute magnitudes and even in their energy dependence. Some authors ^(8,9) ».
