Addendum to the paper**Construction of the Scattering Amplitude to the Differential Cross-Section.**

A. MARTIN

CERN - Geneva

In *Nuovo Cimento*, **59 A**, 131 (1969), I got a condition for the convergence of the iterative solution of the unitarity equation and the uniqueness of the solution. A similar condition was obtained by R. G. NEWTON in *Journ. Math. Phys.*, **9**, 2050 (1968). However, NEWTON and myself completely overlooked the work of N. P. KLEPIKOV, who, as early as 1964, presented a uniqueness condition of the same type in *Žurn. Éksp. Teor. Fiz.*, **47**, 757 (1964) (English translation, *Sov. Phys. JETP*, **20**, 505 (1965)). I am extremely sorry for this omission.
