Fe-Mo System

The $(\alpha\text{Fe})/\lambda/\mu$ invariant at 927 °C was labeled "977 °C" and shown at that incorrect temperature in Fig. 1 on

page 359 in Vol. 3, No. 3 of the *Bulletin*. The revised diagram below replaces Fig. 1. The revised set of tear-out diagrams on pages 113-114 in this issue, which are plotted in both atomic and weight percent, replace those on pages 383-384 of Vol. 3, No. 3.

Fig. 1 Fe-Mo Phase Diagram

Note: The numerical values shown are the assessed values. The drawn curves are from thermodynamic calculations and their positions do not always correspond to the assessed values.
A. Fernandez Guillermet, 1982.
