Palade, G.E., Alberts, B.M., Spudich, J.A. (ed.): **Annual Review of Cell Biology. Volume 8.**- Annual Reviews Inc., Palo Alto 1992, 611 pp. US \$ 51.00

Annual Reviews Inc. is a nonprofit corporation established to promote the advancement of sciences. The first Annual Review was published in 1912 and covered biochemistry. Now there are 27 Annual Reviews covering broad series of scientific and public interest. The first Annual Review of Cell Biology appeared in 1985. This volume covers the following topics: chloroplast gene expression, molecular motors, ABC transporters, plant mitochondrial tRNAs, alternative mRNA splicing, differentiating intestinal epithelial cell, translational regulation, Hox codes and embryonic axes, actin filaments, reverse transcription and integration, cadherins, interaction of bacteria with mammalian cells, biology of syndecans, polarity of epithelial and neuronal cells, protein kinase structure, protein phosphotates, nuclear pore complex, P³⁴ kinases, chromatin structure and transcription.

Readership: all interested in cellular and molecular biology.
