Corrigendum Volume 27 (3) 1998

In the article by Kanjanamaneesathian, Kusonwiriawong, Pengnoo and Nilratana (*Australasian Plant Pathology* **27**:198-206) entitled 'Screening of potential bacterial antagonists for control of sheath blight in rice and development of suitable bacterial formulations for effective application' the text in the last sentence of the right column on p. 201 and in the subsequent sentence carrying over on to p. 202 should read 'The product composition consisted of bacterial suspension 400 mL, hydrogenated vegetable oil (Edward Mendell, NY, United States of America) 800 g, monohydrate lactose (Veghel, The Netherlands) 400 g, polyvinyl pyrrolidone K 30 (supplied by Vidhyasom, Thailand) 24 g, and crosslinked sodium carboxymethyl cellulose (supplied by High Science, Thailand) 6 g. Hydrogenated vegetable oil provided floatability, and polyvinyl pyrrolidone K 30 was added as the binding agent.'
