Howard et al. (2005) *In vitro* survival and growth of *Salmonella* Typhimurium inoculated on yolk membrane after long term refrigerated storage of shell eggs. J Verbr Lebensm 1:28-32

In 2.4 Statistical Analyses (page 29/30) the authors want to change the statement "Data were analyzed using SPSS statistical software (Chicago, Illinois). The analysis of variance test for significance was used, with significance set at the 0.05 level." to "S. Typhimurium counts were subjected to one-way ANOVA using GLM procedure of SAS (SAS Institute, 2001). Number of eggs containing detectable S. Typhimurium and number of eggs containing higher S. Typhimurium than initial inoculation level were analyzed using Chi square analysis. Significant differences among the refrigeration storage times were reported at the 0.05 level."
