Proposition 6.8(d) contains a few sign errors. We thank Marc-Antoine Leclerc for bringing this to our attention. The correct statement is as follows:

If $\langle \alpha_i^\vee, \alpha_j \rangle = -1$ and $\langle \alpha_j^\vee, \alpha_i \rangle = -3$ so that $m_{ij} = 6$, then

$$\begin{aligned} & \Delta_{jijiji} - \Delta_{ijijij} \\ &= \Delta_{ijij}(\kappa_{j,i} + \kappa_{2i+3j,-i-2j} + \kappa_{-i-3j,i+2j} + \kappa_{i+2j,-j}) \\ & \quad - \Delta_{jiji}(\kappa_{i,j} + \kappa_{-2i-3j,i+2j} + \kappa_{-i-2j,i+3j} + \kappa_{i+j,j}) \\ & \quad + \Delta_{ijj}(\Delta_i(\kappa_{i,j} + \kappa_{-2i-3j,i+2j} + \kappa_{-i-2j,i+3j} + \kappa_{i+j,j})) \\ & \quad - \Delta_{iji}(\Delta_j(\kappa_{j,i} + \kappa_{2i+3j,-i-2j} + \kappa_{-i-3j,i+2j} + \kappa_{i+2j,-j})) \\ & \quad + \Delta_{ij}\xi_{ij} - \Delta_{ji}\xi_{ji} + \Delta_j(\Delta_i(\xi_{ji})) - \Delta_i(\Delta_j(\xi_{ij})) \end{aligned} \quad (6.8)$$
