Abstract. In Corollary 12(ii) and Theorem 13(v) of [1] we omitted the hypothesis $\dim \mathfrak{z} \leq 1$. Moreover, in some places the symbol $\mathbb{K}$ must be replaced by the symbol $\mathbb{K}^\times$.

Erratum to: Transformation Groups (2012) 17: 417–470
DOI: 10.1007/s00031-012-9179-4*

1. In Corollary 12(ii) of [1] we omitted the hypothesis $\dim \mathfrak{z} \leq 1$. It should be read:

(ii) *On suppose $\dim \mathfrak{z} \leq 1$. Alors un élément μ de $\mathfrak{z}^*$ est préhomogène si et seulement si $\Phi_{\mathfrak{g}}(\mu) \neq 0$.*

The same hypothesis is missing in Theorem 13(v) of [1].

2. In some places the symbol $\mathbb{K}$ must be replaced by the symbol $\mathbb{K}^\times$ as follows:

Everywhere in Sections 3.7 and 3.11 read $\nu \in \mathbb{K}^\times$ instead of $\nu \in \mathbb{K}$. In the fourth paragraph of Section 3.11 read $\mathfrak{z}_{\mathfrak{g},\text{red}}^* = \mathbb{K}^\times z^*$ instead of $\mathfrak{z}_{\mathfrak{g},\text{red}}^* = \mathbb{K} z^*$. Everywhere in the tenth and eleventh paragraph of Section 4.4 read $t \in \mathbb{K}^\times$ instead of $t \in \mathbb{K}$.
