Effektivitätsanalyse einer klinikinternen allogenen Knochenbank

Orthopäde (2007) 36: 667–672

Die Autoren machen darauf aufmerksam, dass in der Tab. 3, S. 670 die Laborkosten für die HCV-RNA-Testung nicht aufgeführt wurden. Somit erhöhen sich die Kosten für eine freigegebene Knochenspende um EUR 125,-, wobei eine Reduktion durch kostengünstigere Laborleistungen möglich ist.
