The “Integration of Sustainable Energy Conference” (iSEneC) has been mainly organized by the Energie Campus Nürnberg (EnCN), a major research institution for renewable energy. The motto of iSEneC is similar to that of EnCN: aggregation of the single research fields of renewable energy to create an energy system. During 2 days 410 participants discussed in 13 partly parallel sessions the single fields what lead to an energy system. Some outstanding contributions in the field of electrical engineering were selected to be published in this special issue.

The range of the contributions is from multi-energy systems over grid control to screening of component’s correct operation. One field laboratory is the region of Wunsiedel in Northern Bavaria.

The next date of the conference is July 2018.

We are very grateful to Prof. Schnettler and to the team of Springer journal to make this issue possible.

Prof. Wolfgang Arlt
(conference president)
