Under the heading “Formal equivalence models,” the second sentence should read: “These models are most often developed to simulate a specific critical sign or symptom of the human disorder, but are typically extended beyond mere formal similarity to assume characteristics of other types of models (Carlton 1983; McKinney 1989).”

The heading for the section that immediately follows the section entitled “Correlational models” should be “Functional equivalence models.”

Under the heading “Functional equivalence models,” the first sentence should read: “McKinney (1989) discussed models developed to evaluate etiological theories, and mechanistic models developed to study underlying mechanisms.”

In the second paragraph under the heading “Assessments of studies of re-exposure to drug-paired stimuli”, the second sentence from the end of the paragraph should read “One possible difference between the animal and human studies is the dependent variables.”
