Following the publication of the above paper, the authors identified errors in the reaction time (RT) calculations. The corrected RTs more closely match previously published RT data (Mitchell et al. *ACER* 2005; 29(12): 2158–2169). A revision to Table 2 giving the corrected data and statistics is shown below. We now observe an effect of COMT genotype group on WANT trial RT. Including WANT RT as a covariate in our analysis of impulsive choice ratio (ICR) did not impact our finding of significant interacting effects of COMT genotype and age group on ICR, either in the full sample ($F_{(2,127)}=5.12$, $p=0.007$, $\eta^2=0.069$), the largest ethnic group included (white participants; $F_{(2,82)}=11.77$, $p<0.001$, $\eta^2=0.209$), or in

Table 2 COMT genotype groups: Corrected Task Reaction Time Measures

	V/V (<i>n</i> =40)	V/M (<i>n</i> =69)	M/M (<i>n</i> =33)	$F_{(2,139)}$	<i>p</i> -value
Task Performance					
CON Trial RT	1325±306	1363±289	1375±314	0.29	<i>ns</i>
WANT Trial RT	1701±380	1890±420	1904±377	3.41	0.036

the non-white participants ($F_{(2,42)}=1.61$, $p=0.21$, $\eta^2=0.065$). The errors were discovered in the process of modifying the data analysis scripts employed here for use with a new data set.
