Erratum to: Exp Brain Res
DOI 10.1007/s00221-011-2599-x

In the original publication of this article, in Fig. 8e–h, all *black-solid* data traces should be *black-single-short-dash* (as for the Utricle in the legend), and all *black-long-single-dash* data traces should be *black-dash dot* (as for the Saccule in the legend). All *green solid lines* should be *green-dashed*. Moreover, Fig. 9 was missing the word “Utricle” next to the *single-dashed line* in the legend. The corrected figures are presented in following page:

Fig. 8 e–h Simulated fiber recruitment plots for each anterior canal case. Transverse/parallel dipole outperforms other configurations with regard to selectivity

Fig. 9 Model recruitment curve for monopolar anterior canal electrode case shown in Fig. 8a but using cathodic-first pseudomonophasic stimuli. Improved selectivity is apparent compared to standard symmetric biphasic pulse stimulus (Fig. 8e)
