Fig. 3 Venn diagram from (a) on day 30 and (b) on day 90 pyrosequencing analysis for bacterial OTUs at 97 % cutoff found in hypoliths and soil samples. Numbers of shared and unique OTUs for bacterial communities in different soil samples at different times.

Fig. 4 Shannon–Weiner (a) and equitability indices ($\times 10^{-1}$) (b) showing diversity of bacterial communities accompanied by the change of time, as measured by differences in 16S rRNA gene composition using a 3 % dissimilarity cutoff.
