The bubbles or the boiling pot? An ecosystemic approach to culture, environment and quality of life

André Francisco Pilon

Published online: 10 October 2008
© Springer-Verlag 2008

Erratum to: Environ Geol DOI 10.1007/s00254-008-1272-6

The theme of this paper, while certainly thought-provoking, is not in accordance with the stated aims and scope of *Environmental Geology*.

Dr. Pilon's paper was intended for publication in a book of selected presentations from the "International Conference on the Environment: Survival and Sustainability (ESS 2007). Northern Cyprus 19–24 February 2007," also to be published by Springer, and not in the journal *Environmental Geology*.

Please accept the sincere apologies of the editorial staff of *Environmental Geology* for this oversight.

The book will be the first in a series from which there will be a special issue and a book to be published from the same conference. It will be available from SpringerLink in early 2009.

Dr. James W. LaMoreaux
Editor in Chief
Environmental Geology
