Groin lump in a pregnant woman

A 30-year-old pregnant woman presented with a non-tender/painless swelling in the right groin during her third trimester (28 weeks). The swelling had developed suddenly and was more apparent when she was standing, and it was associated with a cough impulse. Ultrasound imaging was performed (Figs. 1, 2 and 3). What was the diagnosis?

Fig. 1 Ultrasound of mass in transverse axis

Fig. 2 Ultrasound of mass in cranio-caudal axis

Fig. 3 Colour Doppler ultrasound of mass in cranio-caudal axis

The diagnosis can be found at [doi:10.1007/s00256-010-0886-4](https://doi.org/10.1007/s00256-010-0886-4).
