15-year-old boy evaluated for popliteal fossa pain following a soccer match. Radiographs (Fig. 1) and magnetic resonance imaging (MRI, Fig. 2) were obtained two weeks following the onset of pain.

The diagnosis can be found at doi: [10.1007/s00256-017-2599-4](https://doi.org/10.1007/s00256-017-2599-4)
