SimBio-M

Simulation for Bio-Mechanics, Material, Medical, Molecules

1–3 July 2009, Juan Les Pins, France

We are pleased to announce the launch of the “SimBio-M” conference. The conference, endorsed by the ESB, is organised jointly by Cranfield University, (School of Applied Sciences, School of Health, Cranfield Defence and Security) and INRETS-Université de la Méditerranée (Faculté de Médecine).

The objective of the conference is to share and explore findings on numerical analysis techniques and mathematical modelling tools, allowing for computer-based investigations and resulting in predictive or exploratory work in various fields of biosciences.

The conference will focus on the advances in simulation technologies in the field of BioMechanics, BioMedicine, BioMaterials, BioMolecules.

The presented work will be organised in four different sessions allowing for exchanges and interactions between the various stakeholders.

We hope to gather participants ranging from researchers to industrialists, from numerical analysts to software developers and from research funding organisations to medical specialists.

Abstract deadline: 15 April 2009.

If you are an ESB member, your conference fees for this meeting will be reduced.
