The New Year 2017 is going to be an important step in the evolution of our journal Surgical and Radiologic Anatomy. Thanks to our publisher Springer, the number of published issues will go up to 12 per year, and this will achieve a faster publication in a referenced issue after the online first. Some renewing and changes have been necessary in the Editorial board and in the International Advisory board, for facing this new increasing of editorial activity. Warmest thanks are given to the associate editors and reviewers who regularly contributed to the scientific contents of our journal in the fields of clinical and radiologic anatomy. We still use the term “radiologic” anatomy that is so limited because X-rays is a small part of “Medical imaging” which is really more appropriate: medical imaging represents the depiction of anatomy, and the great augmentation of the

number of submissions in this section reflects the importance of the research and its strong clinical relevance.

SRA is also becoming this year a completely electronic journal. This evolution is important and will lead to the possibility to publish more figures that are essential in Anatomy.

2017 will also be an important step for the European Association of Clinical Anatomy: the 14th congress will be held in Warwick, UK, and will be once more a joint congress with the British Association of Clinical Anatomists and the Sociedad Anatomica Española.

We wish you a very happy New Year 2017.
