In the original article “Pe-Piper G, Meredyk S, Zhang Y, Piper D, Edinger E (2013) Petrology and tectonic significance of seamounts within transitional crust east of Orphan Knoll, offshore eastern Canada. *Geo-Mar Lett* 33:433–447”, the position of DSDP Site 111 (Deep Sea Drilling Project, Leg 12, 1970) was inadvertently plotted in an incorrect position. The correct position of Site 111 is 50°25.57'N/46°22.05'W. The figure below (updated Fig. 2a of the original article) shows the correct position of Site 111.

The online version of the original article can be found at <http://dx.doi.org/10.1007/s00367-013-0342-2>.
