In this December issue, we have nine regular papers:
The first regular paper is titled “Full and Partial Shape Similarity through Sparse Descriptor Reconstruction” by Lili Wan from Beijing Jiaotong University, China, Changqing Zou and Hao Zhang from Simon Fraser University, Canada.
The second paper is “Multiple-process procedural texture” by Alaa Eldin M. Ibrahim from University of Sharjah, UAE.
The third paper is “Percentage of Human Occupied Areas for Fall Detection from Two Views” by Mikael A. Mousse, Cina Motamed from Université Littoral Côte Opale, France and Eugene C. Zin from Institut de Mathématiques et de Sciences Physiques, Benin.
The fourth paper is “Inverse kinematics using dynamic joint parameters: inverse kinematics animation synthesis learnt from sub-divided motion micro-segments” by Jing Huang, Yu Ding, Catherine Pelachaud from CNRS LTCI and Telecom ParisTech, France and Marco Fratarcangeli from Chalmers University of Technology, Sweden.
The fifth paper is “Non-redundant rendering for efficient multi-view scene discretization” by Naiwen Xie, Lili Wang from Beihang University, China and Voicu Popescu from Purdue University, USA.
The sixth paper is “Scalable 3D shape retrieval using local features and the signature quadratic form distance” by

Ivan Sipiran from Pontificia Universidad Católica del Perú, Peru, Jakub Lokoc, Tomas Skopal from Charles University, Prague, Czech Republic and Benjamin Bustos from University of Chile, Chile.

The seventh paper is “Learning Aggregated Features and Optimizing Model for Semantic Labeling” by Jianhua Wang, Chuanxia Zheng, Weihai Chen and Xingming Wu from Beihang University, China.

The eighth paper is “Fast algorithm for 2D fragment assembly based on partial EMD” by Meng Zhang, Shuangmin Chen, Shi-Qing Xin, Guang Jin, Rong Zhang from Ningbo University, China, Zhenyu Shu from Zhejiang University, China and Jurgen Beyerer from Fraunhofer Institute of Optics, System Technologies and Image Exploitation, Germany.

The ninth paper is “Single image dehazing via an improved atmospheric scattering model” by Mingye Ju, Dengyin Zhang, Xuemei Wang from School of Internet of Things, Nanjing University of Posts and Telecommunications, China.
