Dear Editor,

I thank Dr. Cornips for his comments, and actually I fully agree with these. I also agree that from a surgical point of view, whether the obstruction is developmental or acquired doesn't make much practical difference. But a name is a name, and being able to make the difference between a persistently closed Blake's pouch and a cisternal encyst-

ment could become important if genes were to be identified: as a neuroradiologist, I don't think I could make such a diagnosis from the images presented.

Sincerely yours,

Charles Raybaud
