to a VEGF treated animal. Corrected Fig. 3 is shown below. We apologize for this mistake.

The authors would like to correct Fig. 3 of the original manuscript, since the image in Fig. 3b does not correspond

Fig. 3 VEGF promotes neurovascular histological brain remodeling. **a** Density of surviving neurons in ischemic striatum evaluated by NeuN immunohistochemistry, **b** striatal shrinkage examined by Bielschowsky staining, **c** capillary density in ischemic striatum assessed by CD31 immunohistochemistry and **d** corpus callosum atrophy evaluated by Bielschowsky staining. Note that VEGF increases neuronal survival at 14 dpi (**a**) and reduces brain atrophy later on at 52 dpi (**b**). In addition,

VEGF promotes angiogenesis (**c**) and mildly increases corpus callosum thickness (**d**). Microphotographs are also shown that were taken at 14 dpi (**a**) or 52 dpi (**b–d**). Data are mean values $\pm$ S.D. ($n = 4–8$ animals per group). Data were analyzed by two-way ANOVA followed by two-tailed t tests for individual time-points or two-tailed t tests, as appropriate. * $p < 0.05$ / ** $p < 0.01$ compared with vehicle-treated ischemic mice. Bar 200 μ m (**b**)/50 μ m (**c**, **d**)/20 μ m (**a**)
