Dear Editor,

We carefully read the “Letter to editor” about our article [1] by Ni et al. [2]. We are grateful to the authors for their contribution to different perspectives. They claimed that our work was modeled by Solid-Works software for only triangle configuration of femoral neck fracture. However, we have explained about this situation that “Gok and Inal researched what the best stable fixation practice might be by applying five different screw configuration types on the femoral neck fracture model with finite element analysis (FEA) method.” in the last paragraph of introduction section [3]. We think that is been overlooked during the reading of Ni et al.

Thank you for allowing us to correct this situation.

Compliance with ethical standards

Conflict of interest The authors declare that they have no competing interests.
