We read with great enthusiasm the recent study of de Yazici et al. [1] entitled “Reduction of cisplatin ototoxicity in rats by oral administration of pomegranate extract”. Yazici et al. demonstrated that oral administration of pomegranate extract (PE) had a significant protective effect on external ciliated cells, stria vascularis, and spiral ganglion cells, which are damaged by cisplatin.

I should mention to you that, in this study, Fig. 3 belongs to organ of corti and Fig. 4 present findings of stria vascularis. However, unfortunately somehow, it appears that there has been confusion in the figure titles. In other words; figure titles has written wrong, figure title 3 has written with Fig. 4 and figure title 4 has written with Fig. 3. If you could please make the corrections and change the figure title places 3 and 4, we would be deeply appreciated.
