Fig. 6 cDNA from mother (I.1) amplified with two sets of primers for *CCBE1* and run on an agarose gel. *Lane 1* is a 100-kb ladder. *Lanes 2* and *7* are negative controls. *Lanes 3–6* are amplicons from primers in exons 1 and 6 (480 bp product). *3* and *6* are from skin biopsy of I.1, *4* is from lymphocytes of I.1, *5* is a control skin biopsy. *Lanes 8–11* are amplified with primers from exons 1 and 11 (960 bp product). *Lanes 8* and *11* are from skin biopsy of I.1, *Lane 9* is from lymphocytes of I.1, *Lane 10* is a control skin biopsy
