In the introduction, the evolution of Etna's activity is erroneously described in terms of Ma instead of ka. The sentences should read: "Its activity began at ~500 ka with fissure-fed, undersea eruptions of tholeiitic lava, and became sub-aerial at ~320 ka following regional uplift. From ~110 ka, eruptions started to occur mostly through a central conduit exhibiting both explosive and effusive activity (e.g., Rittmann 1973; Romano et al. 1979; Romano 1982; Chester et al. 1985; Gillot et al. 1994; Branca et al. 2008)."
