DOI: 10.1007/s004640000362

“The role of laparoscopy in the diagnosis and treatment of missed diaphragmatic rupture” by A. Matz, O. Landau, M. Alis, I. Charuzi, S. Kyzer. Surg Endosc 14: 537–539 (2000) (DOI: 10.1007/s004640000112)

The second author’s name, O. Landau, was inadvertently omitted from the online and printed versions of this article. The correct list of authors appears above.

DOI: 10.1007/s004640000373

“A simple laparoscopic method to provide access to the gastroesophageal junction in obese patients” by K. Slim, E. Buc, J. Chipponi. Surg Endosc 14: 503–504 (2000) (DOI: 10.1007/s004640000035)

Figure 2 art was accidentally published upside-down. Correctly oriented figure is printed below:

Fig. 2. The triangular ligament is divided up to 1–2 cm from the falciform ligament while the liver retractor holds the left hepatic lobe downward, allowing a good access to the upper part of the stomach.
