On the fourth page, there are errors in the data (the values were by mistake multiplied by the magnitude of the fabric skin sweating area $A=1.426 \text{ m}^2$) in Fig. 1. The Fig. 1 should be presented as follows:

Fig. 1 The evaporative resistances of the boundary air layer calculated from the manikin nude surface temperature and the wet textile skin surface temperature (by the heat loss option). R_{ea_real} The real evaporative resistance of the air layer calculated from the wet skin
