Magnetic fabric analysis in a mesoscopic fold

A mesoscopic fold in the Lower Carboniferous flysch formation of the Rheno-Hercynian Belt (Hrabůvka quarry, NE part of the Czech Republic). František Hrouda (wearing a cap) is standing on the hinge of the fold, while Martin Chadima (then František's field assistant) drills cores for magnetic fabric analysis. Acquired data were later published in Hrouda et al. (2000). The photograph was taken by Oldřich Krejčí in 1998.
